Fyalkov, B. S. and Gruzinov, V. K.
INFLUENCE OF THE DISTRIBUTION OF THE COMBUSTION ZONES ON BLAST FURNACE OPERATION,
tr. by S. Dobrianskyj. Apr 0 [18] p. 21 refs. Trans.
no. CRL/T-345; [DSIR LLU] M 1947.
Order from OTS or SLA mi\$1.00 61-13329

Trans. of Stal' (USSR) 1958 [v. 18] no. 6, p. 495-502.

DESCRIPTORS: *Blast furnaces, Operation, *Combustion chambers.

The location of the focus of combustion during the normal operation of the furnace depends not only on the temperature and rate of blowing, but also on the distribution of the sections of the most intensive formation of the smelted mass. The material distribution at the top of the blast furnace is associated with the distribution of combustion zones. The efficient use of the tuyeres projection favours the entering of the ellipsoids of looseness into the furnace profile
